Haystax Mobile

Security Mobilized for Action

Haystax Mobile:

Public and Private Security professionals are often called upon to respond to extreme situations with little warning and sparse information.

Be Ready for the Field

Whether for patrol officers, first responders, or commanders, domain awareness and visibility can speed response times and decision-making when things go sideways—that's why **Haystax Mobile** brings the same capabilities to your hands as you have in Command.

Haystax Mobile is an iOS and Android integrated cloud-based solution with online and offline capabilities—because we know that data availability is key in a crisis. With your phone or tablet, you can replace or augment tools used for incident reporting and routine field intelligence gathering. So, why rely on paper maps or radios for situational awareness when you can have exponentially more data at your fingertips?

Visualize with Maps & More

Responsive, fast-loading maps allow visualization of the people, places, and things important to your organization. Additionally, your defined map layers and GIS libraries are always at your fingertips. Ground intelligence can be cross-referenced with existing data, analyzed quickly, and shared across multiple stakeholders. And, when you combine maps with suspicious activity, field interviews, threatening digital feeds, CAD calls, sensor data, scheduled events, crime stats, traffic and weather data, then your team and commanders get the complete contextual awareness they need to respond with confidence.

Solve Problems

You can solve problems with assigned assessments, incidents and events—all from your iOS or Android phone or tablet. Our rapid damage assessment app enables users to capture and share geolocated documentation of debris and damage to residential, governmental, or commercial facilities in real time, facilitating situational awareness during the recovery phase.

The **Haystax Mobile** solution allows on-site assessors to answer questions and capture information in “offline mode,” independent of satellite or Wi-Fi connectivity. The information captured in our mobile solutions is documented in a web-based system to support recovery processes, including individual assistance and public assistance, and to facilitate automated reports throughout recovery.

About Secure Passage

Secure Passage is renowned for providing the **right information at the right time** for federal, state, local, and enterprise security teams. We help secure everything from schools to major assets and critical infrastructure, as well as events on the world stage including political conventions, papal visits, the Indy 500, and a dozen Super Bowls.
