

Haystack:

Event Risk Management, Optimized for Action

The Challenge:

Managing security for large-scale events often involves coordinating multiple agencies, responding to incidents in real-time, and maintaining situational awareness across a vast operational landscape.

The Solution:

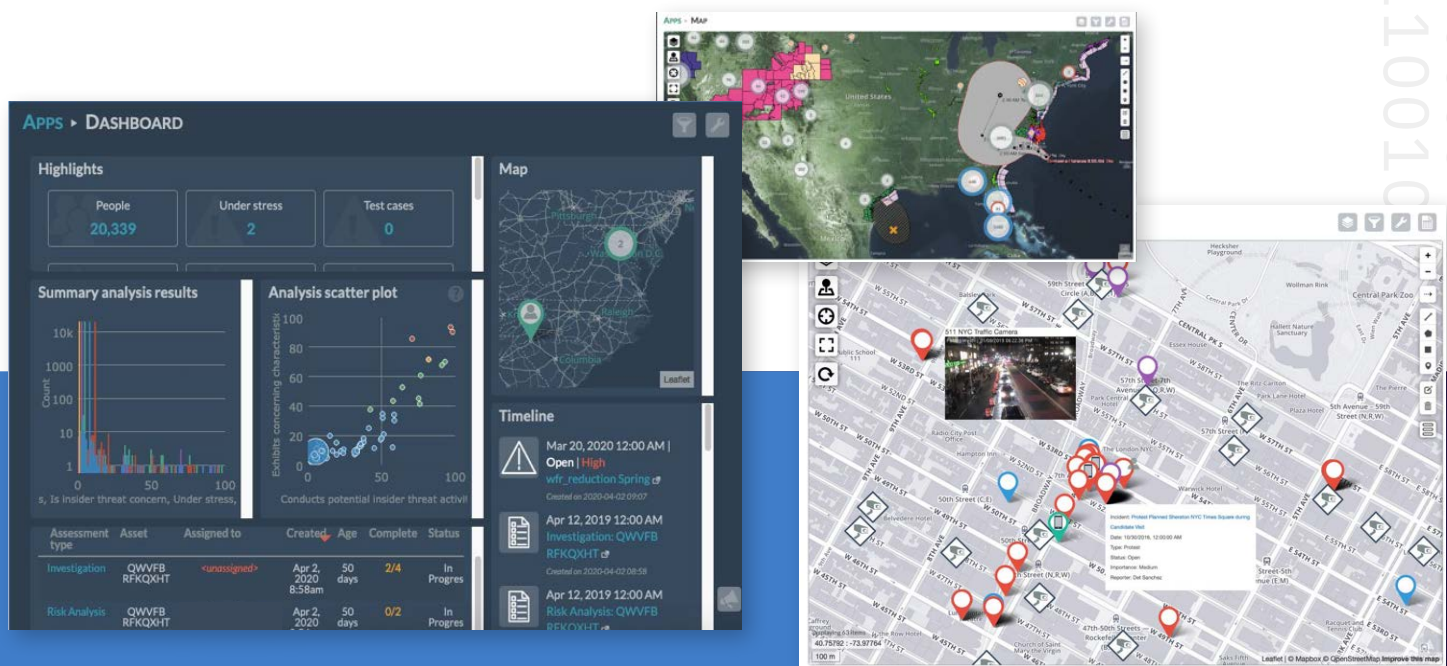

The Haystack platform provides a unified event command environment, fusing data from various sources into a common operating picture and empowering proactive threat analysis and response.

Key Features:

- Real-time data fusion from diverse sources, including weather, traffic, and threat intelligence.
- Contextual awareness and threat prioritization based on user-defined criteria.
- Mobile apps for field personnel, enabling real-time information sharing and incident reporting.
- Robust access controls to ensure data security and user-specific information relevance.

Proven Success:

Haystack has been deployed to secure major events such as Super Bowls, the Indy 500, and the Oscars, providing a proven solution for event risk management.

Haystax: Empowering Safer Events

Enhanced situational awareness for proactive threat detection and response.

Seamless coordination between all stakeholders, including security teams, first responders, and event organizers.

Enhanced Awareness

Seamless Coordination

Improved decision-making based on real-time data analysis and threat prioritization.

Real-Time Data

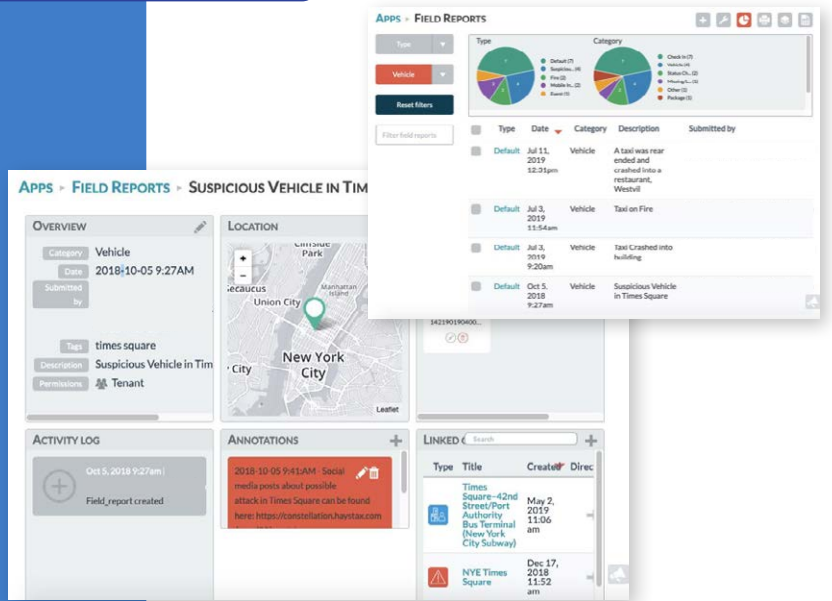

Cost-effectiveness through rapid, cloud-based deployment and intuitive user training.

Cost Effective

During the days leading up to Super Bowl 50, maintaining a common operating picture among all public safety agencies was absolutely necessary for effective information sharing. The Haystax Platform gave our public safety officials the information they needed to quickly and effectively coordinate on emergency response to potential threats and hazards.
